1. With the outcome of interest open, click the forest plot button

2. In the pop-up screen, click ‘Add as Figure’

3. In the screen that opens, click the cog wheels to open the Figure Properties

4. Tick the box next to ‘Show effect estimates with more decimals’ and click ‘OK’. This will show four decimal places on the figure, but will not change the view for the original forest plot for this outcome, or any of the others. The figure will update dynamically if you make any changes to your analysis.
